RAVENOL CVT KFE Fluid is a synthetic CVT (Continuously Variable Transmission) Fluid, designed on the basis of high quality hydrocrack oils with a special additive and inhibition, which ensure a perfect function of the transmission.

RAVENOL CVT KFE Fluid is a synthetic CVT transmission fluid with low viscosity for Toyota CVT transmission.

RAVENOL CVT KFE Fluid guarantees an optimum of power transmission.

Application Note

RAVENOL CVT KFE Fluid was developed for use in CVT transmission (Steel Belt Continuously Variable Transmission), especially for Toyota transmissions.

RAVENOL CVT KFE Fluid ensures a stable viscosity under high mechanical stress in the transmission elements (push belt).

Characteristics

- Very good lubricating ability even at low temperatures in winter
- A high, stable viscosity index
- Very low pour point
- Very good oxidation stability
- Protection against corrosion and foam formation
- Good balanced coefficient of friction
- Neutral behaviour towards sealing materials
- Neutral behaviour by inhibition to non-ferrous metals

RAVENOL special transmission fluids are special developments for special gears and cannot be selected on the basis of technical parameters (viscosity, etc.). Therefore the decision was made not to give technical data. Please note: RAVENOL special transmission fluid is exclusively to apply under the original number, as indicated in the product information. If you are unsure about the right transmission fluid, ask your workshop or dealership for advice on the transmission type and OEM original number or ask our experts, making sure to state the VIN code (vehicle identification number) of your vehicle. Misapplication of RAVENOL special transmission fluid can lead to malfunction of the transmission shifting problems, increased fuel consumption, unwanted slip behavior, etc. and cause the failure of the transmission. Ravensberger Schmierstoffvertrieb GmbH is not liable for transmission failures in case of wrong selection of RAVENOL special transmission fluid.
